

The Valley School has implemented appropriate technical and organisational measures to avoid data security breaches. However, in the event that a data security breach happens, we recognise that it is important for the school to detect it and react swiftly and robustly in order to mitigate any risks to data subjects and to comply with our obligations under the General Data Protection Regulation ('GDPR').

This Data Breach Response Plan sets out how we will respond to any suspected or actual data breaches and should be read alongside our Data Protection Policy and Data Security Policy.

The procedures set out in this document are particularly important as, prior to the GDPR, there was no obligation on the School to notify the Information Commissioner's Office ('ICO') of data security breaches, although it was good practice to report serious breaches.

The GDPR requires the School to report 'notifiable breaches' without undue delay and, where feasible, not later than 72 hours after having become aware of it. Notification of a breach is required unless it is unlikely to result in a risk to the rights and freedoms of individuals. In the event that a report is not made within 72 hours, the School is required to provide the reasons for the delay in reporting it to the ICO.

If there is deemed to be a "high risk" to the rights and freedoms of individuals following a data breach, the School is also required to notify the individuals affected by the breach. However, in the interests of transparency, the School recognise that on some occasions it will be appropriate to notify affected individuals, even if we are not legally obliged to do so.

If the School fails to report a notifiable personal data breach, we are at risk of receiving a sanction from the ICO, which may include a fine. Aside from our desire to avoid receiving any sanctions, the purpose of this Data Breach Response Plan is to ensure that we protect the Personal Data of our stakeholders and minimise any risks to them following a breach.

The School will ensure that staff are aware of and are trained on this Data Breach Response Plan to ensure it is effective should a data security incident occur. In particular, the Data Response Team, identified below, must receive training on their roles and responsibilities should a breach occur. For example, our IT support team must be trained on how to identify if the security of our IT systems has been compromised and the steps that need to be taken to respond to a breach, for example, if data on a remote device needs to be wiped. Further details of our security procedures are set out in our Data Security Policy statement.

We rely on our staff to be alert to the risk of data security breaches and to follow the procedures set out in this Data Breach Response Plan to ensure that we can react promptly in the event that a breach or suspected breach occurs. Any member of staff who becomes aware of a suspected or actual

personal data breach must follow the escalation procedures set out below. Failure to comply with these procedures may be a disciplinary issue.

The School DPO is Carole Connelly from the School DPO Service. **The School Data Protection Lead is David Pearce (Headteacher)**

What is a personal data breach?

The legal definition of a personal data breach is, “a breach of security leading to the accidental or unlawful destruction, loss, alteration, unauthorised disclosure of, or access to, personal data transmitted, stored or otherwise processed.”

A data security breach covers more than the simple misappropriation of data and may occur through incidents, such as:

- Loss or theft of data or equipment;
- People gaining inappropriate access to personal data;
- A deliberate attack on systems;
- Equipment failure;
- Human error;
- Acts of God (for example, fire or flood);
- Malicious acts such as hacking, viruses or deception.
- **Breaches can be categorised according to the following three well-known information security principles:**
 - “Confidentiality breach” - where there is an unauthorised or accidental disclosure of, or access to, personal data;
 - “Integrity breach” - where there is an unauthorised or accidental alteration of personal data;
 - “Availability breach” - where there is an accidental or unauthorised loss of access to, or destruction of, personal data.

Depending on the circumstances, a breach can relate to the confidentiality, integrity and availability of personal data at the same time, as well as any combination of these.

A breach will always be regarded as an availability breach when there has been a permanent loss of, or destruction of, personal data.

A security incident resulting in personal data being made unavailable for temporary period is also a type of breach, as the lack of access to the data could have a significant impact on the rights and freedoms of data subjects, for example, if our IT system goes down. This type of breach should be recorded in the School Data Breach Log set out in Appendix A so that we keep records of all such

incidents. However, depending on the circumstances of the breach, it may or may not require notification to the ICO and communication to affected individuals.

Where personal data is unavailable due to planned system maintenance being carried out, this should not be regarded as a 'breach of security'.

Understanding the risk to the rights and freedoms of individuals

A breach can potentially have a number of consequences for individuals, which can result in physical, material, or non-material damage. This can include loss of control over their personal data, limitation of their rights, discrimination, identity theft or fraud, financial loss, unauthorised reversal of pseudonymisation, damage to reputation, and loss of confidentiality of personal data protected by professional secrecy. It can also include any other significant economic or social disadvantage to those individuals.

When assessing the risk to individuals, the DPO must consider the following factors:

- the type of breach;
- the nature, sensitivity, and volume of personal data;
- ease of identification of individuals;
- severity of consequences for individuals;
- special characteristics of the individual;
- special characteristics of the data controller; and
- the number of affected individuals.

Timescales for reporting a breach

The School is required to report a notifiable breach without undue delay and, where feasible, not later than 72 hours after having become aware of it.

It is likely that the School will be deemed as having become "aware" of a breach when we have a reasonable degree of certainty that a security incident has occurred which has led to personal data being compromised. The GDPR expects us to ascertain whether all appropriate technological protection and organisational measures have been implemented to establish immediately whether a personal data breach has taken place. This puts an obligation on us to ensure that we will be "aware" of any breaches in a timely manner so that we can take appropriate action.

While some breaches may be obvious, in other cases we may need to establish whether personal data has been compromised. In such circumstances, we will investigate promptly in accordance with the procedures below to determine whether a breach has happened. This, in turn, will enable us to decide if remedial action is needed and if the breach needs to be notified to the ICO and the affected data subjects.

It is possible that we may not have established all of the relevant facts following a data security breach or completed our investigation within 72 hours. However, in the event that the School determines that a breach has taken place and that it needs to be notified to the ICO, a report should

be made within 72 hours with the information held at that point in time. In these circumstances, the report to the ICO should explain that further information will be provided as and when it is available.

It is possible that some breaches may come to the attention of a member of staff or may be flagged up by our IT systems. However, it is also possible that we may be notified about breaches by third parties, such as the people who are affected by the breach, a data processor or by the media.

In the event that we investigate a suspected breach and we are able to establish that no actual breach has occurred, the Data Breach Log in Appendix A must still be completed so that we can keep records of 'near misses' or other weaknesses in our systems and procedures in order to continuously review and improve our processes.

Response plan

A member of staff within the School who becomes aware of a suspected or actual data security breach must inform the Headteacher or the DPO of the School by email without delay. The email address for contacting the Headteacher is head@thevalley.herts.sch.uk and the DPO is Carole Connelly carole@schoolDPOservice.com. The Headteacher of the School should be copied in to the email to the DPO.

If a member of staff is unsure whether a breach has happened, the above procedures must still be followed without delay so that the suspected breach can be investigated in order to establish whether a breach has happened and, if so, whether it needs to be notified to the ICO or the data subjects.

The Headteacher will then be responsible for assessing whether the breach or suspected breach needs to be formally escalated to the DPO. If the Headteacher decides not to escalate it to the DPO, the Data Breach Log in Appendix A must be completed as accurately as possible, including the reasons why the incident does not need to be escalated to the DPO. The Data Breach Log should be emailed to the DPO without delay for record keeping purposes.

If the Headteacher decides to escalate a breach or suspected breach to the DPO, they must do so without delay. Where possible, the Data Breach Log in Appendix A must be completed with as much information as possible and emailed to the DPO. However, if it is not convenient or practicable to complete the Data Breach Log, the report can be made by setting the information out in an email.

Once a breach or suspected breach has been reported to the DPO, the DPO must commence an investigation and assess whether they have sufficient information to identify next steps. The purpose of the investigation is to:

- establish if a breach has happened;
- establish the nature and cause of the breach;
- establish the extent of the damage or harm that results or could result from the breach;
- identify the action required to stop the data security breach from continuing or recurring; and
- mitigate any risk of harm that may continue to result from the breach.

The DPO should contact the Headteacher and/or member of staff who made the report if further information is required.

During the course of their investigation, the DPO should consider whether to involve the School's Data Breach Response Team which consists of:

David Pearce, Headteacher, head@thevalley.herts.sch.uk,

Iona Varol, Office Manager and PA to the Headteacher, iona.varole@thevalley.herts.sch.uk

If the DPO is unavailable for any reason, for example, the DPO is on annual leave, on sickness absence or is otherwise not available to respond to the data breach, then the Data Protection Lead (Headteacher) must fulfil the responsibilities of the DPO set out in this Data Breach Response Plan. The Data Protection Lead must have access to the email account identified above to which data breaches are reported.

If the DPO decides to involve the Data Breach Response Team, the above individuals should be copied into email correspondence and provided with regular updates on the investigation and response to the incident.

The DPO should consider whether input is required from the IT, HR or other support team in order to further investigate the incident, including the extent of the incident and whether any steps need to be taken to contain any breach. As the School has external IT and HR support, the relevant contact details are set out in Appendix B.

Depending on the circumstances, the DPO should also consider whether the School insurers should be notified in accordance with policy terms, whether legal advice is required and if the incident needs to be reported to the Police and/or the Local Authority. The DPO should also consider if specialist IT support is required in order to contain and manage a breach and whether PR advisors should be engaged if it is likely that we will need to communicate internally and / or externally with our stakeholders regarding the breach or suspected breach. The contact details for the organisations referred to in this paragraph are set out in Appendix B.

If the breach or suspected breach has occurred at one of our Data Processors, the DPO must liaise with the Data Processor to obtain as much information as possible about the extent of the breach or suspected breach and any steps being taken to mitigate any risk to data subjects. It remains the School responsibility to decide whether to report any such breach to the ICO within 72 hours.

The same requirement applies if the breach or suspected breach is reported to us by a joint Data Controller though in this case we need to establish with the joint Data Controller who is going to report the breach to the ICO and the data subjects if such notification is required.

Depending on the timescales as to when a member of staff originally became aware of a breach, the DPO must be mindful of the requirement to notify the ICO without delay and within 72 hours unless it is unlikely to result in a risk to the rights and freedoms of individuals. As stated above, it is therefore possible that a data security breach may need to be reported to the ICO before the School has fully investigated or contained the breach. A report to the ICO must contain the following information:

- the nature of the personal data breach including where possible, the categories and approximate number of data subjects concerned;
- the name and contact details of the DPO or other contact point where more information can be obtained;
- the likely consequences of the personal data breach;

- the measures taken or proposed to be taken by the School to address the personal data breach, including, where appropriate, measures to mitigate its possible adverse effects.

The DPO is not required to provide precise details in the report to the ICO if this information is not available and an updated report can be made as and when further details come to light. Such further information may be provided in phases without undue further delay. The DPO should inform the ICO if the School does not yet have all the required information and if further details will be provided later on.

If a follow-up investigation uncovers evidence that the security incident was contained and no breach actually occurred, this information could then be added to the information already given to the ICO and the incident recorded accordingly as not being a breach. There is no penalty for reporting an incident that ultimately transpires not to be a breach.

In the event that a notifiable breach is not reported to the ICO within 72 hours, a report should be made without delay with the reasons for the delay.

If the DPO concludes that a referral to the ICO is required and also concludes that there is likely to be a high risk to the rights and freedoms of individuals resulting from the data security breach then the data subjects affected by the breach must also be notified without undue delay. The DPO must liaise with the Headteacher in relation to how the issue should be communicated to the relevant stakeholders. The DPO will need to consider the most appropriate way to notify affected data subjects, bearing in mind the security of the medium as well as the urgency of the situation. The notice to the affected individuals should contain the following information:

- description of the nature of the breach;
- the name and contact details of the DPO or other contact point;
- a description of the likely consequences of the breach; and
- a description of the measures taken or proposed to be taken by the School to address the breach, including, where appropriate, measures to mitigate its possible adverse effects.

Given that a large number of our stakeholders are children, if a data breach affects our pupils, it is likely that the above information will need to be given to parents/carers if the affected pupils are aged 12 or under. If the affected pupils are aged 13 or over notification would ordinarily be to the pupils, however, due to the nature of our school it may also be appropriate to notify parents/carers.

If the DPO decides to notify data subjects about a breach, the notification should at the very least include a description of how and when the breach occurred and what data was involved. Details of what the organisation has already done to respond to the risks posed by the breach should also be included. The School should also, where appropriate, provide specific advice to individuals to protect themselves from possible adverse consequences of the breach, such as resetting passwords in the case where their access credentials have been compromised.

The DPO must complete the Data Breach Log in Appendix A before making the referral to the ICO and keep it under review as and when further information comes to light.

In certain circumstances, where justified, and on the advice of law-enforcement authorities, the School may delay communicating the breach to the affected individuals until such time as it would not

prejudice such investigations. However, data subjects would still need to be promptly informed after this time.

Even if the DPO initially decides not to communicate the breach to the affected data subjects, the ICO can require us to do so, if it considers the breach is likely to result in a high risk to individuals.

In the event that the DPO concludes that it is not necessary to refer the breach to the ICO, the DPO must still complete the Data Breach Log in Appendix A and clearly set out the reasons why the DPO is satisfied that a referral is not required. The DPO must keep the decision under review and be prepared to make a referral to the ICO if any circumstances change or if any information comes to light which means that a referral should be made.

Once the breach has been contained and action taken to stop or mitigate the breach, the DPO must then review the incident and identify any steps which need to be taken in order to prevent a similar breach occurring in future. This may also include whether any disciplinary action is required against any members of staff or pupils.

As part of the review process, the DPO should undertake an audit which should include a review of whether appropriate security policies and procedures were in place and if so, whether they were followed. The audit should include an assessment of any ongoing risks associated with the breach and evaluate the School's response to it and identify any improvements that can be made. The review should also consider the effectiveness of this Data Breach Response Plan and whether any amendments need to be made to it.

Where security is found not to be appropriate, the DPO should consider what action needs to be taken to raise data protection and security compliance standards and whether any staff training is required.

Where a data processor caused the breach, the DPO should consider whether adequate contractual obligations were in place to comply with the GDPR and if so, whether the data processor is in breach of contract.

School holidays

The School recognises that there are times throughout the year when our ability to identify and respond to a breach swiftly and robustly may be impeded because the school is closed or has limited staff available during School holidays. A breach may still occur during these periods and we will

implement the following steps to mitigate any risk caused if a breach happens during the School holidays:

The DPO and Headteacher's email address will be made available to staff and will be available on our website and in our privacy notices so that a member of staff can be contacted should an incident occur. This email address will be monitored regularly by the assigned member of staff.

The DPO will have the contact details for the Headteacher and our IT support so that action can be taken without delay should a breach occur.

The DPO should follow the steps set out above as well as they can in the circumstances. In particular, this should include reporting notifiable breaches to the ICO within 72 hours and, if required, the affected individuals. The report to the ICO should state that the School is closed or has limited staff available due to the School holidays and, depending on the circumstances, advice should be sought from the ICO on the steps the School should take to mitigate any risks.

Review

This Data Breach Response Plan will be kept under review by the DPO and may be revised to reflect good practice or changes to our organisational structure.

Appendix A – Data Breach Log for The Valley School

This Data Breach Log must be completed by a suitably trained person following any reports of a security breach or suspected breach involving personal data. Staff must follow the School Data Breach Response Plan following notification of a breach or suspected breach. In the event you are unsure whether to notify the ICO and the data subjects, you should obtain legal advice without delay as the ICO must be informed about notifiable breaches within 72 hours.

Information	Response
Date and time this record was completed	
Name of person completing this record	
General description of the breach	
Name and job title of person who originally reported the breach / suspected breach	
Date and time the breach / suspected breach was reported	
Who was the breach / suspected breach reported to?	
Has the Data Protection Officer been informed?	
Has the Data Breach Response Team been notified?	
What are the details of the breach / suspected breach (include as much detail as possible) NB: An investigation must be undertaken where appropriate	

Information	Response
Who is responsible for the breach i.e. the School as data controller, a joint data controller or a data processor?	
Is the breach ongoing or has it been contained?	
Is any other information required in order to assess the extent of the breach / the risk to data subjects? If so, specify that information here.	
Whose data has / may have been compromised as a result of the breach / suspected breach?	
Type of data involved in the breach / suspected breach	
Does the breach / potential breach involve sensitive personal data¹ or information about criminal offences?	
What is the likely risk to individuals?	
Is there likely to be a high risk to individuals?	
Does the breach need to be reported to the ICO? If yes, and if the breach happened more than 72 hours ago, what is the reason for the delay if notifying the ICO?	

¹ Information about an individual's: race, ethnic origin, politics, religion, trade union membership, genetics, biometrics (where used for ID purposes), health, sex life, sexual orientation.

Information	Response
<p>If the breach has already been reported to the ICO, confirm the date and time the report was made, who made the report and whether the report was made within 72 hours</p>	
<p>If a report has been made to the ICO, what advice or recommended actions have been given?</p> <p>Specify any sanctions that are issued by the ICO following a breach.</p>	
<p>If a report to the ICO is not being made, confirm the reasons why and whether the decision needs to be kept under review</p>	
<p>Do the data subjects affected need to be notified about the breach? If so, confirm who will notify them and how and when they will be notified.</p> <p>If data subjects are not going to be informed, explain the reasons why.</p>	
<p>Does the breach need to be reported to the Police?</p>	
<p>Do any other steps need to be taken e.g. communication to stakeholders, provision of complaints policy, consult legal advisors, notify insurers, external IT support.</p>	
<p>Is there likely to be press / media interest as a result of the breach? If so, have the appropriate protocols for handling media enquires been followed?</p>	

Information	Response
<p>Outline the actions that need to be taken in response to the breach / suspected breach to reduce the risk of a re-occurrence and who is responsible for implementing them and the relevant timescales. This should include whether an investigation under the School's disciplinary policy is recommended.</p> <p>NB: The information provided in response to this question is likely to be a summary as a more detailed report / audit is likely to be required following a data breach which is notified to the ICO.</p>
